See Back Page For Complete Specifications

THE Remington Model 8 is the fastest sporting rifle made for big game. It is the only high power, autoloading rifle made in this country that positively locks the cartridge in the chamber until the bullet has left the muzzle and thus prevents loss of killing power. It has a box magazine permanently attached to the rifle to prevent loss or damage. Loading can be done with a clip or one cartridge at a time. When the magazine is empty, the action stays open automatically—no chance of losing a shot by pulling the trigger on an empty chamber. The safety is positive and is easily operated—even when wearing gloves.

The model 8 has many features of the military rifle. It is rugged in construction but is nicely balanced and points easily. Dismounting of the rifle is easily accomplished without tools but when assembled it is rigid and sturdy. Taken down it will pack in a space 23 inches long.

Years of testing in the hands of experts in all parts of the world prove conclusively that this Remington Autoloading Rifle is as reliable and sure in operation as any hand-operated arm.

THE Remington Model 14 is the only slide action, *high power*, repeating rifle on the market. A slide action combines accuracy with speed to a greater degree than any other hand-operated type of arm.

Cartridges are loaded through the bottom of the magazine tube which is made with spiral grooves to prevent bullets from touching the primers of cartridges in front. The action is sure, regardless of the position of the rifle or the speed with which the fore-arm is moved. It embodies improvements which positively prevent any possibility of jamming, no matter how fast it is operated. There are thousands of rifles in use giving perfect satisfaction. The take-down is simple and easy, a characteristic feature of all Remington firearms. The breech block which constitutes the entire action may be instantly removed with the fingers, permitting cleaning from the breech.

A choice between Models 8 and 14 depends entirely on the type of action that the individual prefers. Both models handle the same cartridges and will give equally satisfactory results.
