TWO NEW 12-GAUGE, 1-OUNCE RIFLED SLUGS HAVE HIGHER VELOCITY, FLATTER TRAJECTORY

The Remington Arms Company has developed two new 12-gauge, 1-ounce rifled slug loads with higher velocity and flatter trajectory than any rifled slugs previously available to hunters.

These latest additions to Remington's "Slugger" rifled slug line include include both 3-inch Magnum and 2 3/4-inch shell lengths.

Remington's new 3-inch Magnum rifled slug has a muzzle velocity of 1760 feet per second, 200 fps faster than any previous 2 3/4-inch or 3-inch, 12-gauge rifled slugs. It delivers 30 percent greater energy at 50 yards than standard, 12-gauge, 2 3/4-inch rifled slugs.

The new, 2 3/4-inch HV rifled slug has a muzzle velocity of 1680 feet per second, 120 fps faster than the standard, 12-gauge, 1-ounce load. Energy at 50 yards is 20 percent greater.

The increased velocity and flatter trajectory of both these new 1-ounce "Slugger" loads also help hunters to achieve more consistent shot placement within normal slug ranges.

Development of 3-inch Magnum rifled slugs now allows hunters to take full advantage of 3-inch chambered, 12-gauge deer guns such as Remington's pump action Model 870 "Wingmaster" and SP Deer Guns and new Model 11-87 autoloading SP Magnum Deer Gun.
